

Theatre Royal Norwich Inflatables

Giant's Arm

The Giant's Arm is a single inflatable unit blown up by a single fan running off a 16A Cee form plug (this can be converted down to a 13A or 15A supply). Inflation time is approximately 35 seconds. The effect needs to be supported by a preset spot line from above

Inflated the Arm is approximately 7500mm long. The fan is mounted on a small wheeled base off a pivot frame which also contains the arm when deflated and rolled up. Using a line from high level offstage attached to pick up points on the upper arm the effect can be lowered / raised as required.

The hand is designed to fit a person within the gripping fist. We used this with associated flying equipment for the giant to kidnap a flown victim
