

Theatre Royal Norwich Inflatables

The Briars

The Briars are four separate inflatable units each inflated by their own fan. The upper two sections are flown on a single fly bar and the lower two sections are designed to live within a scenic trough.

The two Flown Briars are approximately 7500mm tall and approximately 10000mm wide.

When inflated they are approximately 400mm deep. They attach to the fly bar with cloth ties and the fans are mounted with hook clamps at either end of the bar. Each fan requires a 16amp cee form connection (can be converted down to 15a or 13a).

The two lower sections are each approximately 6500mm wide when inflated with the highest briar reaching to a height of approximately 4000mm. Each has a fan positioned on the offstage edge requiring a 16amp cee form connection (can be converted down to 15a or 13a).
